

Dynanet+ DynaSwitch

Narrowband/Multiservice

The DynaSwitch is a highly reliable, feature-rich twelve port Ethernet switch, suitable for installation in a Nokia Dynanet subrack

The DynaSwitch adds switched Ethernet functionality to existing Dynanet based networks

The DynaSwitch is specifically designed to match the environmental and power supply performance characteristics of the Dynanet product family, so that it can be used in existing installations, where spare subrack space is available.

The DynaSwitch delivers high performance Layer2 Ethernet switching in a compact form factor. Tag based VLANs (802.1q) are supported, allowing network segmentation without being restricted by physical connections. Packet prioritisation as per 802.1p is also supported with 3 levels of user configurable priority.
